

New in ANCILE uPerform® 5.4

Enhancing the user experience with new and improved content outputs and distribution methods.

ANCILE
uPerform®

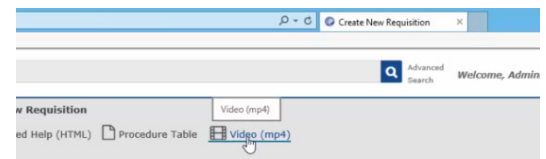

Learners prefer to have options when it comes to consuming learning content and viewing performance support. Each user has a preferred learning style and will choose the method that works best for them.

With ANCILE uPerform 5.4, end-users will more content options as well as a new way to receive performance support across web applications.

Modern Content Options for End-Users

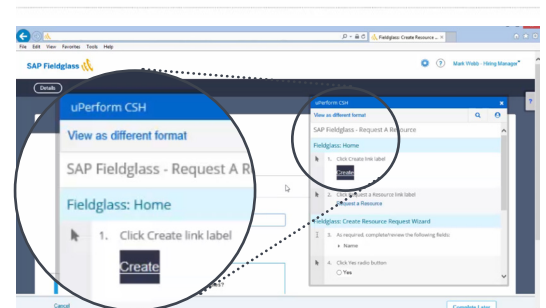

Video Output:

- Quickly generate video output from the same recording used for uPerform simulations
- Available in MP4 and WMV formats
- Easily distribute content to end-users
- Conveniently consume content on mobile devices

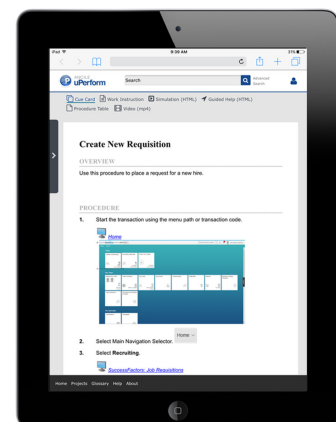

In-Application Context-Sensitive Help for Web Applications:

- Provides context-sensitive help directly within a web application window
- Leverages existing uPerform content
- Allows users to work within the application while the new 'steps panel' output stays open in the browser

End-User Website Skin Modifications:

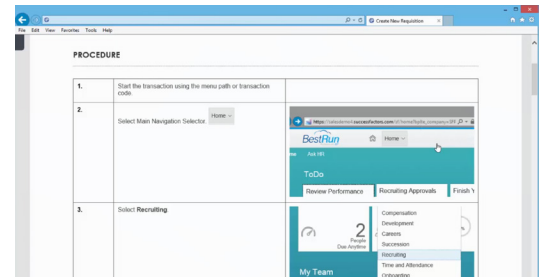

- Mobile responsive website skin for improved viewing on mobile devices
- Addition of object icons for quicker content selection
- Clutter hidden to ease access to content
- Content grouped to simplify information retrieval

Modern Content Options for End-Users

Condensed Output:

- 3-Column layout: Step Number, Action Text, and Cropped Screenshot
- Perfect for use while on the job (performance support) where a hard copy is needed
- Addresses changing learning expectation for learners seeking to consume bite-size content

How uPerform 5.4 Continues to Deliver Value

Content Production & Maintenance	Output published in MP4 and WMV video formats delivers yet another content type to uPerform 5.4 authors, reducing the effort and time required to create, edit, and publish content that meets all user needs.
Training & Learning Efficiency	With uPerform 5.4's Condensed Output, employees working on factory floors, warehouses, or mobile environments can more easily access and consume learning content, reducing the need to learn in a classroom environment or for trainers to travel to the work site.
Employee Efficiency	uPerform 5.4 extends and expands Context Sensitive Help into web-based applications. With a "steps panel" window that appears and remains visible right within the application, employees can now virtually eliminate external searches for help related to all application types.
Technology ROI	With the improved mobile responsiveness found in uPerform 5.4's outputs, employees can now more easily consume learning content on a device of their choice, further driving their understanding, proficiency, and adoption of non-mobile enterprise applications.
Help Desk Efficiency	With the addition of object icons for quicker content selection, the automatic hiding of content areas that are unused, and the grouping of content to simplify information retrieval, help desk professionals using ANCILE uPerform 5.4 will be able to access and deliver help and guidance to end users more quickly and effectively.
