Efficiently plan, prioritize, and optimize your digitization projects

What is LIMB Maestro?

LIMB Maestro is a unique and easy solution to planning, prioritizing and optimizing digitization projects. Working as a supervisor with Processing and Gallery, LIMB Maestro is there at every step of the process so you can build and share your collections.

With a focus on saving time and enriching productivity, LIMB Maestro helps you design your digitization process, plan jobs, ensure communication and monitor all your projects.

Delivered with a simple user interface, the overall presentation is made to be an enjoyable user experience. Maestro is the supervisory tool from the LIMB suite of products needed to make your materials available to the world.

Design & Customize your workflow

With LIMB MAESTRO it is very simple to define the steps of your workflow and the flow for each steps by defining:

- Conditions
- Pass/Fails actions
- Transition screen for operators

Typical Workflow cover the entire process for digitizing documents including steps such as the logistic, preparation of the documents, scanning, processing quality control and delivery.
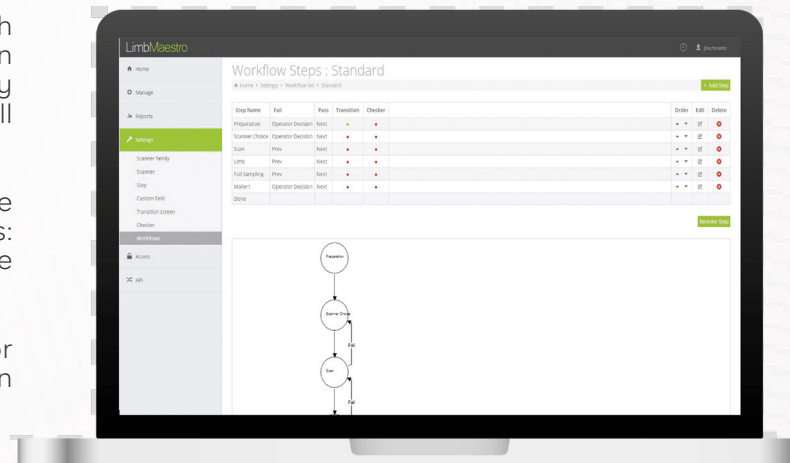

Track your documents

It all starts with a barcode number assigned to each book, which is used throughout the whole digitization process. This tracking document is automatically updated according to the workflow activities you'll have defined.

With a single scan of the book's barcode, at any time each user can see the digitization progress status: like job history, list of tasks and priorities still to be completed.
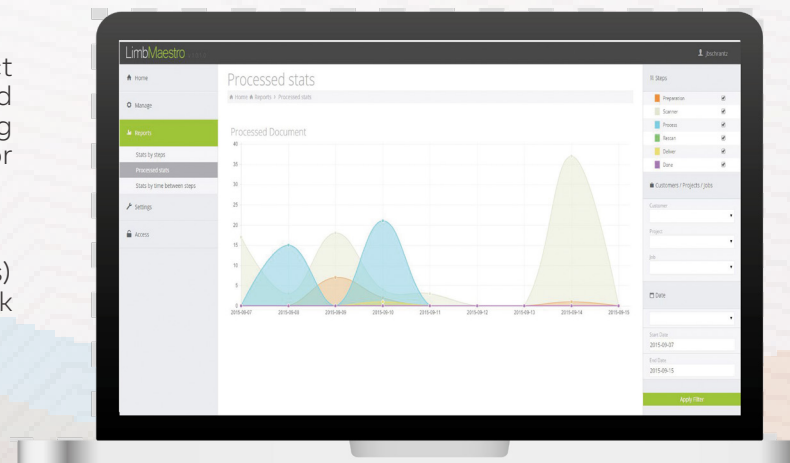

Hence, each operator can leave comments or instructions on transition screens to share information with other operators.
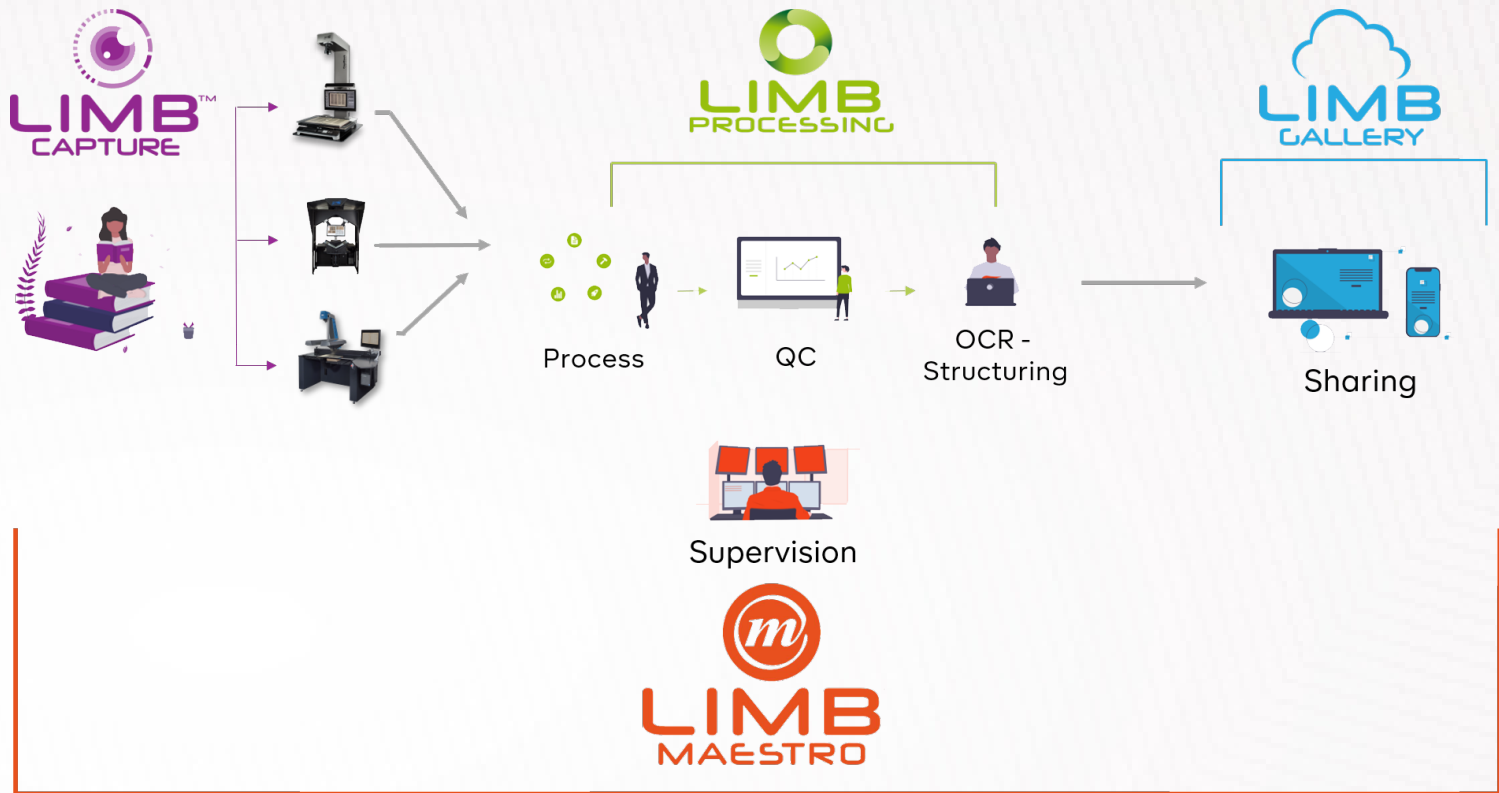

Reporting Modules

LIMB Maestro fully manages your digitization project and in real time automatically generates activity and statistics reports...valuable information for measuring productivity, detecting possible scheduling delays, or even anticipating work delivery, like:

- Project progress
- Remaining document by steps (global or by projects)
- Processed image by steps over time to check productivity trends
- Statistics by users
- Statistics by Scanner family

Fully integrated to our LIMB Software Suite

About i2S
SOLUTIONS FOR YOUR DIGITIZATION PROJECTS

i2S is a company specialized in image capturing and processing technology.

We work for international clients, on a wide range of markets like: health and well-being, sport, software, document digitization, food-processing and agriculture, aviation and aerospace, robotics and industrial control systems, and more generally, wherever image capturing is required.

i2S creates and markets a whole range of scanners and software intended for historical archives and bound documents digitization and promotion. Most of our customers are content owners such as museums, libraries, archives, administrations and a few large companies.

Our clients value our innovative solutions which encompass the complete process of a digitization project: capturing, processing, enriching and sharing. In order to meet the need for digitizing varied and precious collections, we designed the largest range of book scanners on the marketplace – from the smallest size to 2A0 format, including robot scanners.

Today, more than 4.000 book scanners are installed at more than 1.000 customers' sites around the world.

At i2S we work with passion and dedication for our customers, taking up the challenge of putting innovation at the service of digitization projects efficiency.
